

Problem Understanding & Industry Analysis

Problem Statement

The men's fashion retail industry often struggles with:

Lack of centralized customer and product data across stores and online channels.

Manual tracking of orders, inventory, and stock replenishment.

Poor coordination between sales reps, inventory managers, and marketing teams.

No real-time insights into sales performance, stock shortages, or customer loyalty.

This results in frequent stockouts, delayed customer service, inaccurate sales reporting, and limited decision-making for retail managers and executives.

Therefore, a Salesforce CRM solution is needed to digitize customer management, product catalog, order workflows, inventory tracking, and loyalty programs for seamless retail operations.

Objectives

To centralize customer, product, and order data in Salesforce.

To automate order confirmations, stock alerts, and loyalty program workflows.

To streamline sales, inventory, and marketing processes with validation rules and triggers.

To provide real-time dashboards for sales trends, inventory status, and customer loyalty.

To improve store-wide coordination and enhance customer engagement through automation and reporting.

Use Cases

Customer Management – Register new customers with mandatory email validation, assign loyalty tiers (Bronze, Silver, Gold).

Product & Inventory Tracking – Maintain stock records with alerts for low inventory thresholds.

Order Processing – Create orders, auto-calculate totals, deduct stock, and confirm via email.

Loyalty Program – Reward repeat purchases with loyalty points, notify customers of tier upgrades.

Marketing Campaigns – Run seasonal/festive campaigns and track target customers through reports.

Reporting & Dashboards – Real-time insights into best-selling products, low-stock items, top customers, and sales by store/location.

Stakeholder Analysis

Customers: Expect smooth ordering, timely delivery, and loyalty rewards.

Sales Representatives: Need quick access to customer profiles, order history, and loyalty status.

Inventory Managers: Require real-time stock visibility and alerts for replenishment.

Marketing Executives: Need customer segmentation, campaign management, and performance analytics.

Store Managers: Want visibility over team performance, sales metrics, and customer service quality.

Executives/Management: Demand dashboards for strategic decision-making, sales trends, and loyalty growth.
